

DAMAGED FOUNDATION

AUSTINCODE
DEPARTMENT

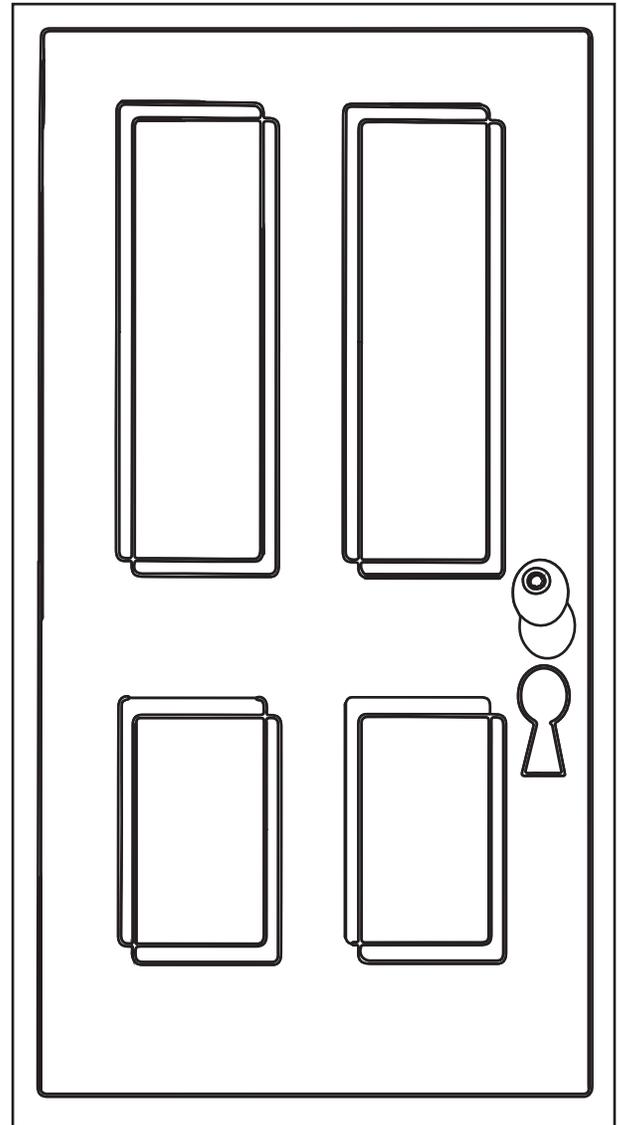

What do inspectors look for?

Every building has a foundation. A foundation is a big block of concrete that holds the building. A solid foundation means that the building can stand strong and safe, but a broken, cracked or damaged foundation could mean danger to those who live in the building. Inspectors look for damaged foundations so that they can be fixed and people can live safe in the buildings they hold.

DOORS OR WINDOWS THAT WON'T OPEN

AUSTINCODE
DEPARTMENT

What do inspectors look for?

When a door or window won't open properly, a code inspector will let the owner know so that it can be quickly fixed.

Code inspectors make sure that all doors and windows open easily so that in case of an emergency, you are able to get out!

WATER LEAKS

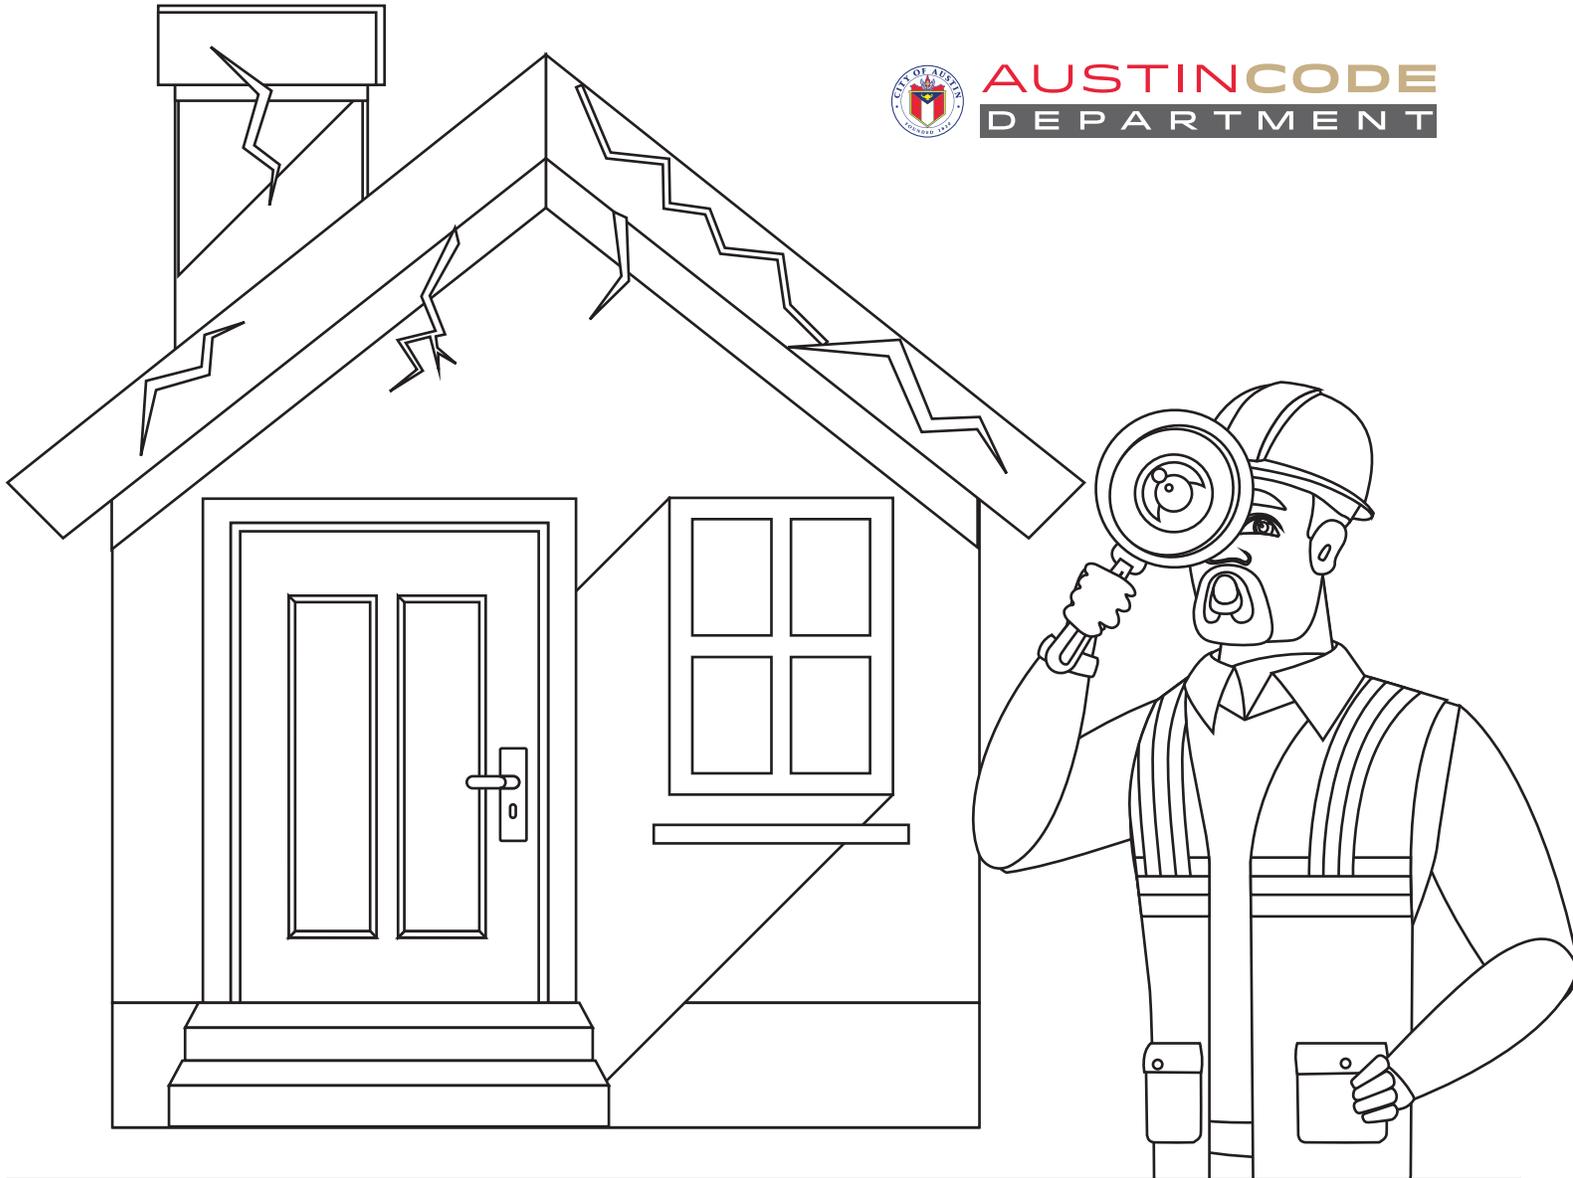

AUSTINCODE
DEPARTMENT

What do inspectors look for?

Inspectors look for water leaks because they could point out broken pipes. Why is this important? Well, if a broken pipe is not addressed it could lead to water leaking under the floor which could damage floors and furniture. Some times water leaks lead to mold (fuzzy-looking dirt) that could cause allergies. Keeping an eye on leaks is important to keep you dry & allergy-free!

DAMAGED ROOFS

AUSTINCODE
DEPARTMENT

What do inspectors look for?

Holes in the ceiling allow rain, dirt, air and even critters like rats come inside! Having holes or even cracked ceilings create an unsafe environment, Code Inspectors are able to identify them and point them out to have fixed so you are safe and sound!

BROKEN WINDOWS

AUSTINCODE
DEPARTMENT

What do inspectors look for?

Inspectors keep an eye out for broken windows, but why do you think broken windows could be dangerous for you and your family?

Windows let air in and out but also bugs and critters! Also, sharp edges are dangerous and could harm you if you touch them. If you see a broken window, tell an adult to make sure it gets replaced.
